CONTENTS OF VOLUME 148

Number 1, July 1994

Asymmetric Synthesis of Naproxen by Supported Aqueous-Phase Catalysis	Kam T. Wan and Mark E. Davis	1
CO Hydrogenation on a Nickel Catalyst. I. Kinetics and Modeling of a Low Temperature Sintering Process	M. Agnelli, M. Kolb, and C. Mirodatos	9
Reactivity and Microstructure of Rh and Rh–Ce in NO + CO	J. M. Schwartz and L. D. Schmidt	22
Cracking of *n*-Heptane on Metal-Free H-ZSM-5 Zeolite at High Hydrogen Pressure	Josefin Meusinger, Joachim Liers, Andreas Mösch, and Wladimir Reschetilowski	30
Propane Dehydrogenation on Chromia/Silica and Chromia/Alumina Catalysts	S. De Rossi, G. Ferraris, S. Fremiotti, E. Garrone, G. Ghiotti, M. C. Campa, and V. Indovina	36
CO and NO Interaction with Pd–Ag and Pd–Cr Bimetallic Catalysts. I. X-Ray Diffraction, Infrared Spectroscopy, and Thermoreaction	A. El Hamdaoui, G. Bergeret, J. Massardier, M. Primet, and A. Renouprez	47
Effect of Coexistence of Magnesium Vanadate Phases in the Selective Oxidation of Propane to Propene	Xingtao Gao, P. Ruiz, Qin Xin, Xiexian Guo, and B. Delmon	56
Vapour-Phase Substitution of Chlorobenzene with Ammonia, Catalyzed by Copper-Exchanged Zeolites	M. H. W. Burgers and H. van Bekkum	68
Solid-State ^{1}H MAS NMR Characterization of γ-Alumina and Modified γ-Aluminas	E. C. DeCanio, J. C. Edwards, and J. W. Bruno	76
Selective Formation of Isobutane and Isobutene from Synthesis Gas over Zirconia Catalysts Prepared by a Modified Sol–Gel Method	Zhentao Feng, Walter S. Postula, Can Erkey, C. V. Philip, Aydin Akgerman, and Rayford G. Anthony	84
Properties of Tschernichite, the Aluminum-Rich Mineral Analog of Zeolite Beta	R. Szostak, K. P. Lillerud, and M. Stöcker	91
Cyclopropane Reactions over Brønsted, Cation, and Metal Sites in Ni/NaX Zeolites	Mark W. Simon, C. O. Bennett, and Steven L. Suib	100
Iron–Aluminum Cluster Catalysts Obtained by Alkoxy Synthesis. 1. Liquid-Phase Oxidation of Hexadecane	M. V. Tsodikov, V. Ya. Kugel, Yu. V. Maksimov, O. G. Ellert, V. M. Shcherbakov, and O. V. Bukhtenko	113
Iron–Aluminum Cluster Catalysts Obtained by Alkoxy Synthesis. 2. Iron–Aluminum Catalysts for CO Hydrogenation: Selectivity–Structure Relation	Yu. V. Maksimov, M. V. Tsodikov, O. V. Bukhtenko, O. G. Ellert, and V. V. Matveev	119
The Hydrogenation and Oligomerisation of Propyne over an Ion-Exchanged Copper on Silica Catalyst	Nicholas J. Ossipoff and Noel W. Cant	125
Direct Partial Oxidation of Methane over ZSM-5 Catalyst: Metals Effects on Higher Hydrocarbon Formation	S. Han, D. J. Martenak, R. E. Palermo, J. A. Pearson, and D. E. Walsh	134
Vapor Phase Beckmann Rearrangement over Silica-Supported Tantalum Oxide Catalysts	Takashi Ushikubo and Keisuke Wada	138
An Investigation of the Reduction Behaviour of MoS_2/Al_2O_3 and the Subsequent Detection of Hydrogen on the Surface	G. B. McGarvey and S. Kasztelan	149

3 813HI XL 1057
12/94 31249-193

MTBE Synthesis on Partially Alkali-Exchanged HY Zeolites	A. Kogelbauer, M. Öcal, A. A. Nikolopoulos, J. G. Goodwin, Jr., and G. Marcelin	**157**
On the Interaction of 1-Propanamine with Cation-Containing MFI Zeolite	Vladislav I. Kanazirev, Geoffrey L. Price, and Kerry M. Dooley	**164**
Investigation of the Role of Nickel and the Effect of Gas Phase Sulfur Compounds on the Perfomance of Ni–Mo/γ-Al_2O_3 Hydrodenitrogenation Catalysts	Umit S. Ozkan, Liping Zhang, Shuangyao Ni, and Edgar Moctezuma	**181**
Role of Molybdenum at the Iron Oxide Surface	Jianmin Zhao, Zhen Feng, Frank E. Huggins, Naresh Shah, Gerald P. Huffman, and Irving Wender	**194**
Microcalorimetric Study of Silica- and Zeolite-Supported Platinum Catalysts	S. B. Sharma, J. T. Miller, and J. A. Dumesic	**198**
Hydrotalcites as Base Catalysts: Influence of the Chemical Composition and Synthesis Conditions on the Dehydrogenation of Isopropanol	A. Corma, V. Fornés, and F. Rey	**205**
A Study of Dealuminated Faujasites	A. I. Biaglow, D. J. Parrillo, G. T. Kokotailo, and R. J. Gorte	**213**
A Transient Kinetic Study of the CO/H_2 Reaction on Rh/Al_2O_3 Using FTIR and Mass Spectroscopy	A. M. Efstathiou, T. Chafik, D. Bianchi, and C. O. Bennett	**224**
Potential-Programmed Reduction: A New Technique for Investigating the Thermodynamics and Kinetics of Chemisorption on Catalysts Supported on Solid Electrolytes	Yi Jiang, Ioannis V. Yentekakis, and Constantinos G. Vayenas	**240**
Formation of 2,3-Pentanedione from Lactic Acid over Supported Phosphate Catalysts	Garry C. Gunter, Dennis J. Miller, and James E. Jackson	**252**
Selective Reduction of Acetic Acid to Acetaldehyde on Iron Oxides	E. J. Grootendorst, R. Pestman, R. M. Koster, and V. Ponec	**261**
ESCA, XRD, and IR Characterization of Aluminum Oxide, Hydroxyfluoride, and Fluoride Surfaces in Correlation with Their Catalytic Activity in Heterogeneous Halogen Exchange Reactions	A. Hess, E. Kemnitz, A. Lippitz, W. E. S. Unger, and D.-H. Menz	**270**
Microwave Electromagnetic Field Effects on Reforming Catalysts. I. Higher Selectivity in 2-Methylpentane Isomerization on Alumina-Supported Pt Catalysts	Luc Seyfried, François Garin, Gilbert Maire, Jean-Marie Thiébaut, and Georges Roussy	**281**
Modeling the Thiophene HDS Reaction on a Molecular Level	E. Diemann, Th. Weber, and A. Müller	**288**
Hydroisomerisation–Hydrocracking of Decane over Al- and Ga-Pillared Clays	R. Molina, S. Moreno, A. Vieira-Coelho, J. A. Martens, P. A. Jacobs, and G. Poncelet	**304**
Preparation of Supported Heterogeneous Catalysts by Pulse Impregnation: Application to $Ru_3(CO)_{12}$/2,2′-Bipyridine/SiO_2 Catalyst	Matti Haukka and Tapani A. Pakkanen	**315**
Partial Oxidation of Methane to Carbon Monoxide and Hydrogen with Molecular Oxygen and Nitrous Oxide over Hydroxyapatite Catalysts	Yasuyuki Matsumura and John B. Moffat	**323**

New Insights into $VOPO_4$ Phases through Their Hydration	Farid Benabdelouahab, Jean-Claude Volta, and René Olier	**334**
Structure of SiO_2 on Al_2O_3 Monolayer Catalysts: Investigation by Infrared Spectroscopy and ^{29}Si MAS NMR	T.-C. Sheng, S. Lang, B. A. Morrow, and I. D. Gay	**341**
Interaction of Copper Catalysts and Si(100) for the Direct Synthesis of Methylchlorosilanes	Nicole Floquet, Sefa Yilmaz, and John L. Falconer	**348**
Characterization of Silica- and Alumina-Supported Vanadia Catalysts Using Temperature Programmed Reduction	Manoj M. Koranne, James G. Goodwin, Jr., and George Marcelin	**369**
Oxygen Involvement in the Partial Oxidation of Methane on Supported and Unsupported V_2O_5	Manoj M. Koranne, James G. Goodwin, Jr., and George Marcelin	**378**
Notes		
Partial Oxidation of Methane over Silica- and Alumina-Supported Vanadia Catalysts	Manoj M. Koranne, James G. Goodwin, Jr., and George Marcelin	**388**
Low Temperature Chemisorption of CO on Supported Molybdena–Alumina Catalysts	V. Sazo, C. Scott, M. J. Pérez Zurita, E. J. Eljuri, and J. Goldwasser	**392**
Characterization of Different Precursors and Activated Vanadium Phosphate Catalysts by ^{31}P NMR Spin Echo Mapping	M. T. Sananes, A. Tuel, G. J. Hutchings, and J. C. Volta	**395**
Estimate of the Basicity of Ln_2O_3–Bi_2O_3 Catalysts for Oxidative Coupling of Methane through Diffuse Reflectance UV–vis Experiments	M. A. Centeno, M. J. Capitan, P. Malet, I. Carrizosa, and J. A. Odriozola	**399**
Preparation and Characterization of High Surface Area Al_2O_3–$MgAl_2O_4$ Solid Solutions	C. Otero Areán, C. Mas Carbonell, G. Turnes Palomino, and J. B. Parra Soto	**403**
Infrared Study of the Interaction between Tin and Platinum Supported on Alumina	J. Sarkany, I. Di Cosimo, Z. Sarbak, and R. P. Eischens	**406**
Characterization of Ru–Cu Catalysts Using H_2 Chemisorption at 77 K	Bin Chen and James G. Goodwin, Jr.	**409**
Letters to the Editors		
Comments on A. Corma *et al.*, "On the Compensation Effect in Acid–Base Catalyzed Reactions on Zeolites"	A. Palermo, M. P. Suárez, and C. M. Aldao	**413**
Reply to "Comments on A. Corma *et al.*, 'On the Compensation Effect in Acid–Base Catalyzed Reactions on Zeolites'"	A. Corma, F. Llopis, J. B. Monton, and S. Weller	**415**

Number 2, August 1994

CO Chemisorption on Cobalt Clusters: Choosing Clusters for Theoretical Analysis of Surface/Adsorbate Interactions	M.C. Zonnevylle, J. J. C. Geerlings, and R. A. van Santen	**417**
Kinetic Studies of Reduction of Nitric Oxide with Ammonia on Cu^{2+}-Exchanged Zeolites	Takayuki Komatsu, Makoto Nunokawa, Il Shik Moon, Toshiya Takahara, Seitaro Namba, and Tatsuaki Yashima	**427**
FTIR Spectroscopic Study of Thiophene, SO_2, and CO Adsorption on Cu/Al_2O_3 Catalysts	Martin B. Padley, Colin H. Rochester, Graham J. Hutchings, and Frank King	**438**

Selectivity Enhancement in the Hydrogenation of α, β-Unsaturated Aldehydes and Ketones Using Thiophene-Modified Catalysts	Graham J. Hutchings, Frank King, Ifedi P. Okoye, Martin B. Padley, and Colin H. Rochester	**453**
Modification of Selectivity in the Hydrogenation of Crotonaldehyde Using Cu/Al_2O_3 Catalysts Modified with Sulphur Compounds: Effect of Sulphur Source	Graham J. Hutchings, Frank King, Ifedi P. Okoye, Martin B. Padley, and Colin H. Rochester	**464**
Direct Observation of Hydrogen Spillover on Carbon-Supported Platinum and Its Influence on the Hydrogenation of Benzene	S. T. Srinivas and P. Kanta Rao	**470**
Transmission Electron Microscopy and Energy Dispersive X-Ray Spectroscopy Studies of Pt–Re/γ-Al_2O_3 Catalysts	Z. Huang, J. R. Fryer, C. Park, D. Stirling, and G. Webb	**478**
Catalysis at the Toluene/Water Interface: Octadecyl Immobilized H-ZSM-5 Catalyst Promoted Hydrolysis of Water-Insoluble Esters	Haruo Ogawa, Tensai Koh, Kazuo Taya, and Teiji Chihara	**493**
Ammoxidation of Propane over Antimony–Vanadium–Oxide Catalysts	Roland Nilsson, Thomas Lindblad, and Arne Andersson	**501**
On the Nature of the Catalytic Activity of Silica-Based Oxide Catalysts in the Partial Oxidation of Methane to Formaldehyde with O_2	Adolfo Parmaliana, Valerii Sokolovskii, Danila Miceli, Francesco Arena, and Nicola Giordano	**514**
Characterization of H–Y and Cr–Y Zeolite Catalysts during the Oxidative Destruction of CFC11 and CFC12	Swati Karmakar and Howard L. Greene	**524**
A High-Resolution TEM Study of the Annealing of Pd Particles Supported on MgO	S. Giorgio, C. R. Henry, C. Chapon, and C. Roucau	**534**
A Kinetic Investigation of Co-Solvent Effects in Oxyfunctionalization of *n*-Hexane by Hydrogen Peroxide on TS-2	H. Fu and S. Kaliaguine	**540**
Bimetallic Catalysts. VI. Surface Composition of Pt–Mo/SiO_2 Catalysts: Influence of Reaction Media	G. Leclercq, A. El Gharbi, L. Gengembre, T. Romero, L. Leclercq, and S. Pietrzyk	**550**
Modifications of H-ZSM-5 Catalysts by NaOH Treatment	G. Lietz, K. H. Schnabel, Ch. Peuker, Th. Gross, W. Storek, and J. Völter	**562**
Acidity and Stability of MCM-41 Crystalline Aluminosilicates	A. Corma, V. Fornés, M. T. Navarro, and J. Pérez-Pariente	**569**
Surface Segregation in Bimetallic Clusters: Statistical–Mechanical Modeling Using Cluster Site Energies	Liqiu Yang and Andrew E. DePristo	**575**
Effect of Cesium Modification of Silica-Supported Vanadium Oxide Catalysts in Butane Oxidation	L. Owens and H. H. Kung	**587**
The Influence of Reaction Temperature on the Cracking Mechanism of 2-Methylhexane	G. R. Bamwenda, Y. X. Zhao, and B. W. Wojciechowski	**595**
Selective Isomerization of Butene to Iso-Butene	Zheng Xing Cheng and Vladimir Ponec	**607**
Interaction of Hydrogen with Pt–Silicalite	P. Mériaudeau, A. Thangaraj, C. Naccache, and S. Narayanan	**617**
Preparation, Structural Properties, and Hydrogenation Activity of Highly Porous Palladium–Titania Aerogels	M. Schneider, M. Wildberger, M. Maciejewski, D. G. Duff, T. Mallát, and A. Baiker	**625**

A Steady-State Tracing Kinetic Analysis of Oxidative Coupling of Methane over Li^+-Doped TiO_2: Mechanistic Aspects of the Carbon and Oxygen Reaction Pathways to Form CO_2	A. M. Efstathiou, S. Lacombe, C. Mirodatos, and X. E. Verykios	**639**
Heterogeneous Catalytic Isotopic Exchange of Benzylic Compounds in Solution	Jacques Azran, Michael Shimoni, and Ouri Buchman	**648**
Adsorption of Perrhenate on Modified Aluminas	Francis M. Mulcahy, Marwan Houalla, and David M. Hercules	**654**
Characterization of the Acid Strength of SiO_2–ZrO_2 Mixed Oxides	H. J. M. Bosman, E. C. Kruissink, J. van der Spoel, and F. van den Brink	**660**
Strategies in Controlling the Homogeneity of Zirconia–Silica Aerogels: Effect of Preparation on Textural and Catalytic Properties	J. B. Miller, S. E. Rankin, and E. I. Ko	**673**
Modeling of Pulsed Gas Transport Effects in the TAP Reactor System	Bai Sheng Zou, Milorad P. Duduković, and Patrick L. Mills	**683**
Mechanistic Importance of Intermediate N_2O + CO Reaction in Overall NO + CO Reaction System. II. Further Analysis and Experimental Observations	Byong K. Cho	**697**
A Study of Anomalous Temperature-Programmed Reduction Profiles of Cu_2O, CuO, and CuO–ZnO Catalysts	G. Fierro, M. Lo Jacono, M. Inversi, P. Porta, R. Lavecchia, and F. Cioci	**709**
Controlled Deposition from the Gas Phase of Surface Species on Amorphous Supports: Preparation of Ruthenium–Bipyridine Catalysts for 1-Hexene Hydroformylation and Water–Gas Shift Reaction	Pipsa Hirva, Tapani Venäläinen, and Tapani A. Pakkanen	**722**
Pt–CeO_2 Contact and Its Effect on CO Hydrogenation Selectivity	D. S. Kalakkad, A. K. Datye, and H. J. Robota	**729**
Effects of Carrier Doping on Kinetic Parameters of CO_2 Hydrogenation on Supported Rhodium Catalysts	Zhaolong Zhang, Angelica Kladi, and Xenophon E. Verykios	**737**
An *in Situ* Infrared Study of the Reactivity of Adsorbed NO and CO on Rh Catalysts	Girish Srinivas, Steven S. C. Chuang, and Santanu Debnath	**748**
Self-Condensation of *n*-Butyraldehyde over Solid Base Catalysts	Hideto Tsuji, Fuyuki Yagi, Hideshi Hattori, and Hideaki Kita	**759**
Microcalorimetric, Spectroscopic, and Kinetic Studies of Silica-Supported Pt and Pt/Sn Catalysts for Isobutane Dehydrogenation	R. D. Cortright and J. A. Dumesic	**771**
A Probe of Brønsted Site Acidity in Zeolites: ^{13}C Chemical Shift of Acetone	A. I. Biaglow, R. J. Gorte, G. T. Kokotailo, and David White	**779**

Erratum

Volume 146, Number 2 (1994): T. Z. Tzou and S. W. Weller, "Catalytic Oxidation of Dimethyl Methylphosphonate," pp. 370–374 **787**

NOTICE

The Subject Index for Volume 148 will appear in the December 1994 issue as part of a cumulative index for the year 1994.

JOURNAL OF CATALYSIS

INFORMATION FOR AUTHORS

The ***Journal of Catalysis*** publishes articles dealing with original studies in heterogeneous and homogeneous catalysis as well as studies relating catalytic properties with chemical processes at surfaces, studies of chemistry of surfaces, and engineering studies related to catalysis. All articles will be published in English.

Submission of Manuscripts. Manuscripts should be sent by registered mail to either of the Editors:

Professor W. Nicholas Delgass
c/o ***Journal of Catalysis***
Editorial Office
Suite 1900
525 B Street
San Diego, California 92101-4495
Telephone: (619) 699-6469
Fax: (619) 699-6859

or

Professor Frank S. Stone
School of Chemistry
University of Bath
Bath BA2 7AY, England

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the ***Journal of Catalysis*** represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of Manuscript. Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. Submit manuscript (in English) in quadruplicate, including the original typewritten copy, with copies of all figures and tables. Originals of micrographs should also be submitted in quadruplicate for purposes of manuscript reviewing. All material (including tables, reference lists, etc.) should be typed double-spaced on one side of 8.5 × 11-in. white bond paper (with 1-in. margins on all sides). Each page of the manuscript should be numbered. *Page 1* should contain the article title, authors' names (without degrees), affiliations, a running title (abbreviated form of title) not exceeding 55 letters and spaces, and the name and complete mailing address (also telephone and fax numbers and e-mail address, if possible) of the person to whom proof should be mailed. *Page 2* should contain a short abstract.

Authors should use descriptive headings in this order: Abstract, Introduction, Methods, Results, Discussion, Acknowledgments, and References.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

If the manuscript refers to recently submitted manuscripts or papers in press (with the ***Journal of Catalysis*** or other journals) then please supply three copies of them so that the reviewers can judge the new manuscript in its proper context.

Revised manuscripts should be returned with one copy marked to show where changes have been made.

Notes and **Letters to the Editor** may not exceed 8 double-spaced typewritten manuscript pages (including tables and figures). Accepted Notes will not receive publication priority over articles.

Letters to the Editor will be considered for priority publication under the following conditions: (a) Letters must be related to some statement made in a recently published article in this Journal; (b) in cases of conflicting views on any topic, no more than one Letter from each author will be accepted.

Units of weights, measures, etc., when used in conjunction with numerals should be abbreviated and unpunctuated (e.g., 10%, 50 ml, 3 g, 8 cm).

The SI (Systeme International) system of units will be accepted without editorial change. Authors using other units are encouraged to define them in terms of SI units once in each publication, e.g., in an article where pressures are quoted in Torr to write "1 Torr = 133.3 N m^{-2}." For information concerning SI units, see *Quantities, Units and Symbols for Physical Chemistry,* 4th ed., prepared by I. Mills and published by Blackwell Scientific, Oxford, 1988.

Footnotes should be avoided if possible; but if essential, they should be designated by superscript Arabic numerals (starting with title) in the text.

Tables should be numbered with Arabic numerals in order of mention in the text. They should be typed double-spaced on separate pages. Each table should have a short descriptive caption typed (double-spaced) above the table. Table footnotes (indicated by superscript, lowercase, italic letters) should be typed at the end of the table.

Figures should be numbered with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed double-spaced together on a separate page. All illustrations should be in finished form suitable for reproduction. They should be planned to fit the proportion of the printed page ($7\frac{1}{8}$ × 9 in.; column width, 3.5 in.). No figures should exceed 8.5 × 11 in. (21 × 27.5 cm). Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough

(10–12 points) to take a reduction of 50–60%. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black.

Copies of drawings are not acceptable unless they are high contrast glossy prints. All but the very simplest structures and structural formulas must be designed for direct reproduction. Illustrations in color can be accepted only if the authors defray the cost.

Electron micrographs. Please supply four photographic copies of these so that the reviewers can inspect the fine details they contain.

References to the literature should be cited in the text by Arabic numerals in parentheses, set on the text line, and listed numerically at the end of the paper. Abbreviations of journal titles should follow the style used in the latest *Chemical Abstracts' Service Source Index*. Style and punctuation of references should be in accordance with the following examples:

1. Zhang, X., Jefferson, D. A., and Lambert, R. M., *J. Catal.* **141,** 583 (1993).
2. Louis, C., and Che, M., *in* "Reactivity of Solids" (P. Barret and L. C. Dufour, Eds.), Vol. B, p. 1057. Elsevier, Amsterdam, 1985.
3. Pines, H., "The Chemistry of Catalytic Hydrocarbon Conversions." Academic Press, New York, 1981.

Proofs. Proofs will be sent to the author, with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints without covers will be provided free of charge. Additional reprints may be purchased; an order form will be included with proofs.

Personal Computer Disks. Manuscripts may be submitted to the ***Journal of Catalysis*** on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Please supply the file as a straight ASCII file with generic codes specified by the publisher. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular and mathematical material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing the disk for typesetting conversion and a list of generic codes, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).

ADVANCES IN CATALYSIS

Edited by

D.D. Eley
The University, Nottingham, U.K.

Bruce C. Gates
University of California, Davis

Werner O. Haag
Mobil Research and Development Corporation, Princeton, New Jersey

Since 1948, **Advances in Catalysis** has set the standard for bringing readers up-to-date with the latest developments in a rapidly changing field. Each volume continues to be the authoritative source for catalysis research, while bridging the gap between the papers that report and the textbooks that teach. Researchers look to **Advances in Catalysis** for definitive assessments and in-depth articles of broad interest.

Praise for the Serial

"Special scientific merit and a wealth of information make the book extremely valuable, like other volumes in the series."
—American Scientist

Volume 40

CONTENTS: *H.H. Kung,* Oxidative Dehydrogenation of Light (C2 to C6) Alkanes. *I. Mochida and K. Sakanishi,* Catalysis in Coal Liquefaction. *H. Wendt, S. Rausch, and T. Borucinski,* Advances in Applied Electrocatalysis. *R.R. Chianelli, M. Daage, and M.J. Ledoux,* Fundamental Studies of Transition Metal Sulfide Catalytic Materials. *Moro-oka and W. Ueda,* Multicomponent Bismuth Molybdate Catalyst. Subject Index.

September 1994, c. 305 pp., $120.00 (tentative)/ISBN: 0-12-007840-6

Volume 39

CONTENTS: *M. Boudart,* Memorial Note on Mikhail I. Temkin. *V.P. Zhdanov,* Application of Percolation Theory to Describing Kinetic Processes in Porous Solids. *F. Schüth, B.E. Henry, and L.D. Schmidt,* Oscillatory Reactions in Heterogeneous Catalysis. *W.M.H. Sachtler and Z. Zhang,* Zeolite–Supported Transition Metal Catalysts. *E. Iglesia, S.C. Reyes, R.J. Madon, and S.L. Soled,* Selectivity Control and Catalyst Design in the Fischer–Tropsch Synthesis: Sites, Pellets, and Reactors. *Y. Morikawa,* Catalysis by Metal Ions Intercalated in Layer Lattice Silicates. *L.E. Manzer and V.N.M. Rao,* The Catalytic Synthesis of Chlorofluorocarbon (CFC) Alternatives. *J. Caro, M. Bülow, H. Jobic, J. Kärger, and B. Zibrowius,* Molecular Mobility Measurement of Hydrocarbons in Zeolites by NMR Techniques. Subject Index.

1993, 425 pp., $120.00/ISBN: 0-12-007839-2

Volume 38

CONTENTS: *B.E. Conway and B.V. Tilak,* Behavior and Characterization of Kinetically Involved Chemisorbed Intermediates in Electrocatalysis of Gas Evolution Reactions. *N. Cardona-Martinez and J.A. Dumesic,* Applications of Adsorption Microcalorimetry to the Study of Heterogeneous Catalysis. *Y. Izumi and M. Onaka,* Organic Syntheses Using Aluminosilicates. *M. Ichikawa,* Metal Cluster Compounds as Molecular Precursors for Tailored Metal Catalysts. Subject Index.

1992, 412 pp., $110.00/ISBN: 0-12-007838-4

Volume 37

1990, 327 pp., $126.00/ISBN: 0-12-007837-6

ENCYCLOPEDIA OF PHYSICAL SCIENCE AND TECHNOLOGY

SECOND EDITION

edited by
Robert A. Meyers

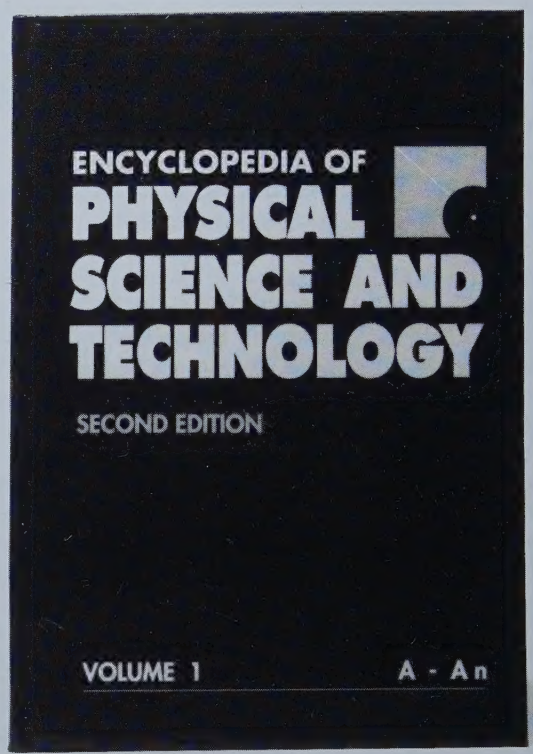
From the Reviews of the First Edition

"Comprehensive, current, easy to use, and authoritative....It exceeds all of its goals of providing a scholarly encyclopedia covering the physical sciences, mathematics, and engineering. It is highly recommended for large public libraries with a science and technology division, academic libraries, and special libraries with an interest in science and engineering."
—BOOKLIST/REFERENCE BOOKS BULLETIN

"The outstanding feature of this work is the currency of the material covered. This reference tool will serve as a research aid for scholars and advanced students and will find use in academic, special and large and medium-sized public libraries."
—THE NEW YORK PUBLIC LIBRARY

"I expect it to become a standard in every library attempting to represent broadly the fields of science and technology."
—THE LOS ANGELES PUBLIC LIBRARY

"This encyclopedia will be a very useful and needed addition to the literature of the physical sciences and technology."
—AMERICAN REFERENCE BOOKS ANNUAL



A massive revision of the distinctive **Encyclopedia of Physical Science and Technology**, this **Second Edition** includes 155 new articles that fill three volumes—a total of 2,400 additional pages. This eighteen-volume work maintains the high quality of the original edition, praised by both the Los Angeles and New York Public Libraries. Featuring longer and more complete articles than other similar works and specifically covering all the physical sciences, this encyclopedia deserves a place on every library's bookshelf.

Key Features

- Articles are arranged alphabetically for easy access
- Each entry begins with a detailed table of contents, a glossary of unusual terms, and a concise definition of the topic, followed by an in-depth presentation
- Extensive cross-references
- Each article has passed a review by its author's peer group
- 92% of the articles have been revised and updated
- 155 articles have been added

Comparison of the First and Second Editions	*First Edition*	*Second Edition*
Volumes	15	18
Articles	550	705
Pages	11,651	14,080
Bibliographic Entries	5,000	6,500
Figures	6,600	8,500
Tables	1,400	1,800
Illustrations	5,500	8,200
Glossary Entries	6,800	8,700
Index Entries	55,000	70,000
Chemical and Mathematical Equations and Algorithms	13,850	17,625

Subject Areas Covered

12%	Aeronautics, Materials, and Engineering
8%	Astronomy and Space Technology
11%	Atmospheric and Earth Sciences
14%	Computer Science and Telecommunications
8%	Electronics
8%	Mathematics
1%	Military
16%	Physical, Organic, Inorganic, and Environmental Chemistry
6%	Physics
6%	Power, Propulsion, and Nuclear Technology

Eighteen-Volume Set
1992, 14,080 pp., $2500.00/ISBN: 0-12-226930-6
